

# Docker Li-Ta-REE Project

## Northwestern Ontario

**FLYROCK**

## Project Highlights

- Direct access from Highway 11/17.
- UAV LiDAR and mag. susceptibility surveys completed on most of property.
- Current active work permit.
- Multiple showings & occurrences.
  - Benham Pegmatite returned values of 2.33% Li<sub>2</sub>O over 2.1m (channel).
  - Cates, Crablaw, etc., has historical grab sample values as high as 11.44% Zn, 0.23% Cu, 6.21%Pb and 2.26opt Ag.
  - 1988 DDH returned 545ppb Au, 12.7ppm Ag, 498ppm Cu and 515ppm Zn.
- LCT pegmatite property comprised of 259 claim cells.
- Over \$500K performed in exploration, making it eligible to be qualifying property for both CSE and TSX.
- Approximately \$460K in exploration reserve.
- Highly prospective for critical elements (gallium, cesium, tantalum, etc.).
